## Review Requirements Reformatting in SRS and Accuracy Requirement Additions

These changes are modified from version 1.2 of the SRS.

Added some accuracy requirements for our measurements that should be easy enough for us to accomplish with the hardware that we selected.

Also revised the formatting of requirements as promised.

Priority: **Normal**

Type: **Task**

State: **Fixed**

Assignee: **Corey**

Subsystem: **No Subsystem**

Fix versions: **Unscheduled**

Affected versions: **Unknown**

Fixed in build: **Next Build**

Estimation: **?**

Is this still valid? Not sure how up to date this is or what exactly changed but if it's requirements that are in a table now they look fine to me.

**Corey** — 26 Oct 2015, 01:46

Yes this is still valid. I moved the requirements basically into a table, and I added requirements so that we had it so that we measure within 0.01 rad/sec angular velocity measurements and within 0.1 meters per second squared for the acceleration measurements.

Ok my review is complete. Need Stephen to Review and we should be able to close this out.
